

## VPON Digital Recorder and Remote Camera Server:

Re-play Software called DCS.EXE

When video footage is copied from VPON unit to CD there should be two files present

- (a) dcs.exe – replaying file, please load this to the reviewing computer to allow video to be played
- (b) The second file will have a time and date of the incident. When you have loaded the above dcs file double click this file to begin playback.

NWV Player – VPON Video Replayer – Playing Back:

**Snapshot Play Pause Play Speed Camera View Selection Time Video Resolution**

- (1) The video will automatically playback, the VPON System records using motion detection, i.e. the camera image will only appear when there is movement in front of camera.
- (2) Select single screen or multiscreen mode to view desired cameras
- (3) You can speed up or slow down playback using the Play Speed control or you can pause and use the button to the right of this to frame forward through the images.
- (4) Press the snapshot button to produce a still image, through this you can zoom in on specific areas if required.
- (5) When finished select the close button (red X) at top right hand side of screen
